High Security Cylinder

Standard cylinders are prone to abuse attack, picking, drilling or forcing. Security can also be compromised on standard cylinders because the keys can be easily duplicated. The 1700 series' complex cylinder mechanism provides greater resistance to abuse attack. Unauthorised key duplication is inhibited by the use of a cc key profile available only to authorised dealers, combined user identification card.

General Specification

- 11 pin tumbler system providing millions of combinations**
- Side locking bar and pin tumbler system**
- Complex key profile inhibits picking**
- Anti drill pins**
- Solid brass body and plug**
- 3 nickel silver keys**

1710 - High Security Rim Cylinder

Retro-fits all standard Rim cylinders
Available in polished brass or satin chrome finish

1720 - High Security Rim Mortise Cylinder

This cylinder will retro-fit all standard mortise cylinders but attention should be paid to the cylinder length (1 inch or 25.4mm) and the type of cam required. This cylinder is fitted with a Yale type cam.
