

# 2500 Series

## Digital Rim Lock

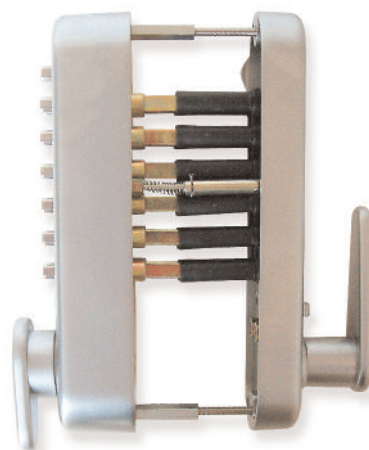

### Fit and Forget

The revolutionary "Easy Code Change" Zone mechanical digital locks are robustly constructed and, if installed and maintained correctly, will give years of satisfactory service.

Most problems associated with standard mechanical digital locks are caused by incorrect fitting of the code keys when changing codes. The "Easy Code Change" eliminates this problem as there are NO code pins to change. Code changing is achieved simply by turning a screwdriver through 180° for each code digit you wish to set.

### General Specification

- Over 8000 different code combinations
- Auto deadlocking for added security
- Suitable for left or right hand doors
- Available in standard or 'hold back' versions
- Code easily changed in seconds
- Satin chrome, 60mm backset available

**Note:** These locks are NOT suitable for UPVC doors.
