

5000 Series

Electronic Access Control Lock

30

The 5000 series is a battery operated electronic lock, which is easy to install, programme and operate. The lock is suitable for domestic and commercial applications, especially on multi-user doors where conventional key management control may be a problem. There are 2 locks in the range but the only difference is the lock bolt, where there is a choice between an automatically deadlocking deadlatch (5000/EL) and deadbolt (5100/EL). There are two levels of access control:

- 1) By electronic keypad with a range of codes, 1 thru 9
Which provides more than 500,000 possible combinations
- 2) By touch code key / reader which accepts up to 255 user keys

Programming code changes, either keypad or touch code key, is easily performed with the use of function buttons.

The lock has a passage function (lock can be opened without code), which again is easily programmed via the function buttons.

The lock is powered by 4 x AA alkaline batteries, which, with normal usage should last 12 months.

A low voltage warning system signals low battery power.

In case of complete electronic failure the lock is fitted with a key override system. Touch code keys are not supplied with the lock but are available as optional extras.

Keys can be supplied in a range of different holders.

Locks are supplied with a 60mm backset as standard but a 70mm backset is available to order on the 5000/EL version

Technical Specification

Product code	Description	Finish
5000/EL/SCP	Deadlatch version	Satin chrome
5000/EL/BCP	Deadlatch version	Bright chrome
5000/EL/PB	Deadlatch version	Polished brass
5100/EL/SCP	Deadbolt version	Satin chrome
5100/EL/BCP	Deadbolt version	Bright chrome
5100/EL/PB	Deadbolt version	Polished brass
