

550 Series

Hardened Steel Trapezoidal Lock

The Warrior

The 550 Series has been specifically designed for use where the strength of the padlock is a priority. The fully enclosed hardened steel shackle prevents any attack by conventional bolt cutters and the solid hardened steel body prevents attack by drilling or sawing to a high degree. The hardened steel anti-drill plate protects the CEN grade 4, 6 pin cylinder which is fitted as standard and fully replaceable. As the cylinder is easily replaceable the padlock can be master keyed, or keyed to customer specification. The padlock body is weldable steel so permanent fitting to security gates is possible.

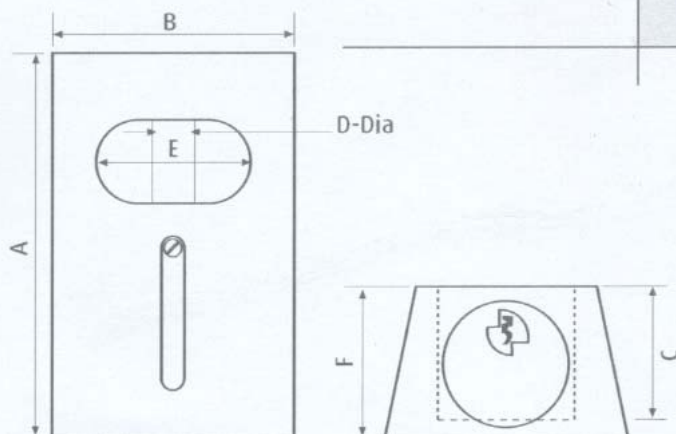

NOTE: To ensure optimum performance it is recommended that the internal locking balls (2) are regularly coated with waterproof grease when in use outside.

General Specification

Hardened steel shackle - 56-58 HRC
Solid hardened steel body
Function - fully enclosed shackle
Anti pick drivers
Anti pick key profile
Large range of key combinations

2 brass keys, nickel plated
Key retention
Easy cylinder change
